

Agriculture as a business by means of advanced technology

If you want to supply fresher and tastier vegetables without worrying about chemical fertilizers, and you want to replace the vegetables that have been imported so far in response to the globalization of foods, and if you want stable supply without worrying about the effect of natural environment and weather, and still have high quality vegetable through steady supply, and vegetables that can be adjusted to detailed requirement such as taste, sizes and nutrient contents, this can be the answer.

The business plan to meet the customer's satisfaction can be made. And this will be the proposal on advanced technology that backup the performance, providing a cutting-edge cultivation facility to produce locally, with detailed cultivation guidance to achieve production plan.

Using technology to create vegetable you dream of.

USHIO

Agriculture Solution

Vegetables that can be cultivated

Leaf lettuce, herbs and other leaf-vegetables are the basic, but fruit vegetables can also be cultivated
